

Manufacturer Of Insulated Electrical Sleeving Selects CMM for Turnkey Installation Of Regenerative Thermal Oxidizer

When a leading producer of insulated electrical sleeving decided to relocate its entire continuous solvent based coating operation to an area that will be used as a permanent total enclosure to capture the coating line emissions, they turned to The CMM Group for the turnkey installation of a Regenerative Thermal Oxidizer.

The 10,000 scfm CMM RTO is designed to destroy 97% of the 11.5 pounds per hour of xylene or aromatic 100 solvent VOCs generated from seven vertical tower ovens during the company's 24 hours per day, 6 days per week production schedule..
