

## Worry-free Maintenance, Risk-free Operation

Customized preventive maintenance packages by  
The CMM Group fit your maintenance and budget needs

- ◆ Prevent equipment downtime while sourcing hard-to-find components
- ◆ Keep equipment running safely and efficiently
- ◆ Ensure equipment is within safety and compliance regulations

Plant managers know the importance of having well-maintained equipment. They know that taking pro-active steps to keep their equipment running safely and efficiently is top priority. They also know that time spent searching for potentially obsolete or outdated components can cause lost production time. Facilities may or may not have in-house personnel available to perform preventive maintenance.

**When are preventive maintenance and inspections essential?** Any equipment with specific safety, insurance or regulatory requirements certainly must have regular maintenance/inspections. Identifying and correcting potential operating concerns before they happen is the whole point of taking preventive measures. If equipment performance issues are occurring and operating costs are starting to rise, preventive maintenance is probably overdue.

The technicians at The CMM Group have the knowledge and resources to provide your company with complete preventive maintenance and inspection services for our oxidizers or other brands, ovens and dryers, other production and ancillary machinery. Our technicians will start with a comprehensive audit of mechanical, electrical and process controls. A detailed report will be submitted with checklists and recommendations. This report will provide an important record for regulatory compliance and insurance requirements.

### Oxidizers/ Air Pollution Control Systems

#### Custom Process Equipment:

- ◆ Ovens & Dryers
- ◆ Cheese Melters
- ◆ Coaters & Web Handling
- ◆ Energy Management Systems
- ◆ Ancillary Systems

### Aftermarket:

- ◆ Rebuilds/Upgrades
- ◆ Preventive Maintenance
- ◆ Spare & Replacement Parts

### Services:

- ◆ Consulting Services
- ◆ Site Engineering
- ◆ Product Engineering
- ◆ Inspection Services
- ◆ Turnkey Installation

The CMM Group can provide system and component upgrades, rebuilds, and retrofits, spare parts, catalyst cleaning, ceramic media and media replacement, and other aftermarket services.

The following are some typical components and systems that require maintenance:

#### **Mechanical Systems**

- ◆ Burner components
- ◆ Fans and motors
- ◆ Dampers and ductwork
- ◆ Expansion joints
- ◆ Compressed air cylinders
- ◆ Valves
- ◆ Insulation
- ◆ Ceramic media
- ◆ Internal support structures
- ◆ Heat exchangers
- ◆ Access doors
- ◆ Gaskets and seals
- ◆ Exterior skins
- ◆ Flame arrestors
- ◆ Desiccant air dryers
- ◆ Air compressors

#### **Electrical Controls**

- ◆ Programmable logic controllers (PLCs)
- ◆ Human machine interfaces (HMIs)
- ◆ Control panels
- ◆ Monitoring software
- ◆ Pressure switches
- ◆ Data loggers/recorders
- ◆ Variable frequency drives (VFDs)
- ◆ Thermocouples
- ◆ Safety devices
- ◆ Emergency stops
- ◆ Disconnects
- ◆ Process interlocks
- ◆ Wiring connections

**For Emergency Service and Parts,
